PRODUCT OUTLINE

Vision Statement

In today's scientifically driven world, we see digital dynamics in everything around us. Advanced development is trending in local businesses, and includes people getting more involved and contributing to the society.

Let's See is a website which aims at bringing such people together through their commonly accessible local services and similar interests/hobbies. The website presents updated information about what's established and what's upcoming in any place and lets people form a community by connecting through similarly viewed facilities.

Moreover, it's a helpful medium for someone totally new in any place and wants to comfortably accommodate themselves with the new-fangled socio-economic scenario, as well someone who has been living in the place for years and is open to meeting new people.

Project Charter

Project Creators	Akash Munjial, Anushree Jana, Shreya Sawant
Document Author	Shreya Sawant
Start Date	10/12/18
Last updated	10/14/18
Owners	Anushree Jana; Shreya Sawant; Akash Munjial

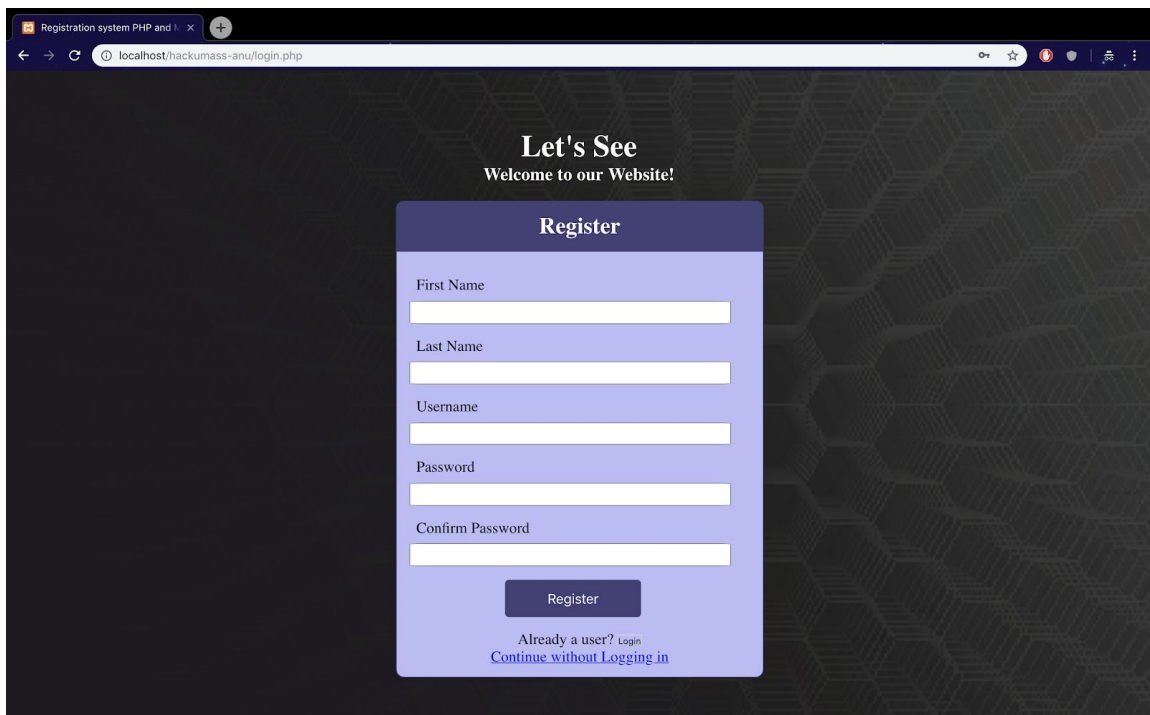

USER FEATURES

- People can browse through the website by inputting the location they're interested in exploring.
- There are 9 different filters or categories for letting people optimize their search and find what they're looking for.
- People can register and create a user account to access additional features of the application like commenting and connecting with people.
- Registered users can login to their accounts with the correct username and password.
- A button on the top right corner allows the users to access their account settings – change password and log out.
- A user will be able to connect with other registered users on visiting a resource specific page by sending add requests to people they want to get in touch with.
- Users can publicly add review comments for any resource specific page when they have logged in.

WEBSITE NAVIGATION

Login/Register

- New users can enter first name, last name, username, and password and register themselves with an account.
- Already registered users can simply click on the login button and enter correct username and password to access their account.
- People can view the website without registering or log-in by clicking on [continue without logging in](#).

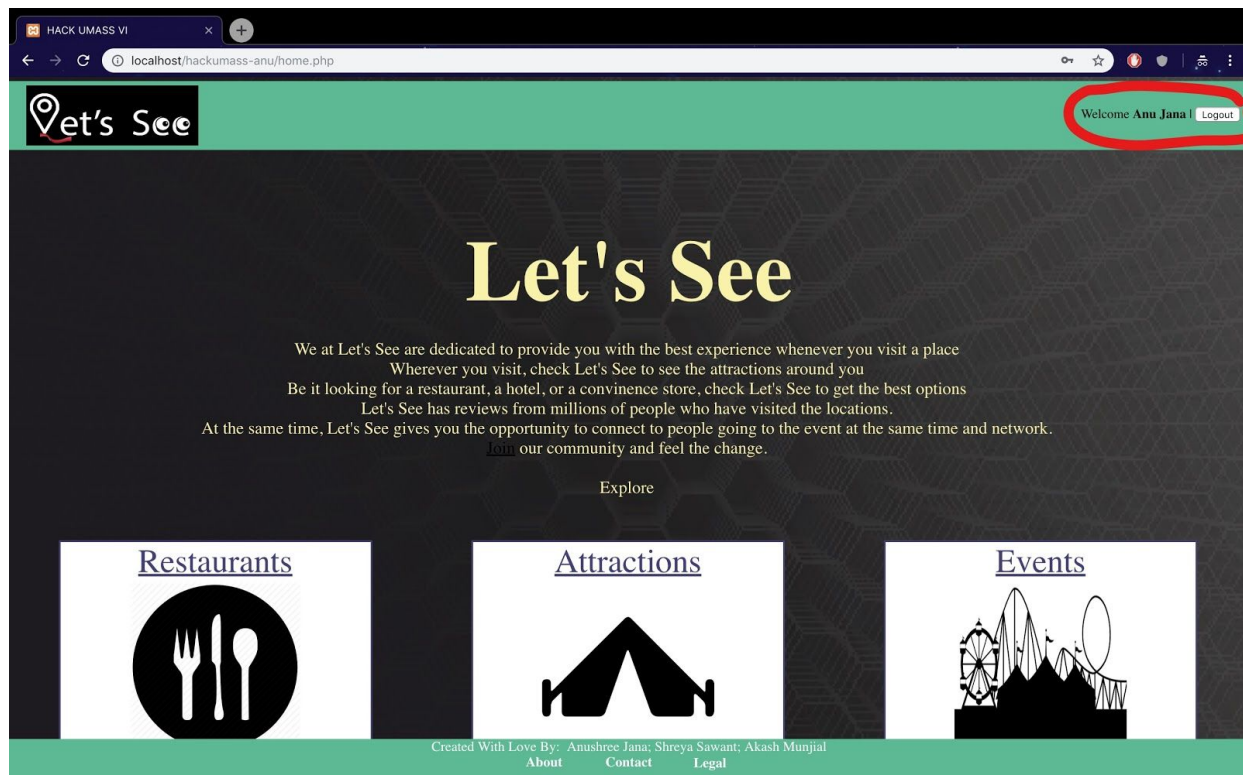

The screenshot shows a web browser window with the address bar displaying 'localhost/hackumass-anu/login.php'. The page has a dark background with a subtle geometric pattern. At the top, it says 'Let's See' and 'Welcome to our Website!'. Below this is a light blue box titled 'Register'. Inside the box, there are five input fields labeled 'First Name', 'Last Name', 'Username', 'Password', and 'Confirm Password'. Below these fields is a dark blue 'Register' button. At the bottom of the box, there is a link 'Already a user? Login' and a link 'Continue without Logging in'.

Home Page

- New users can enter first name, last name, username, and password and register themselves with an account.

Account Management

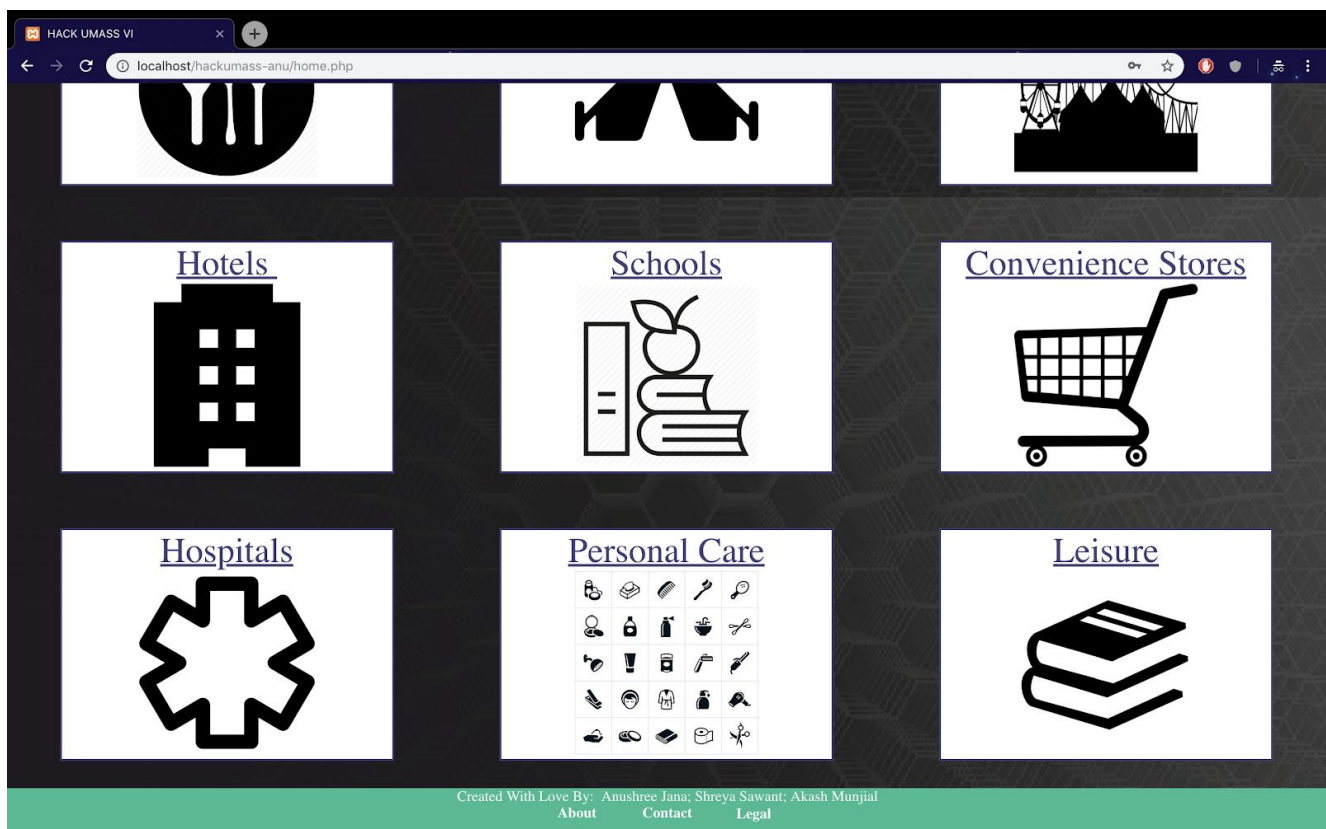

- If the user hasn't logged in, a log in button appears on the top right.
- If the user has logged, in his username appears on the top right.
- Clicking on the username will enable the user to manage his account settings.
- The user can change password by entering the original password and new password twice for confirmation.
- The user can log out by clicking on the log out button.

- The home page displays the different facilities in the form of 9 blocks as follows:

Category wise Filtering details

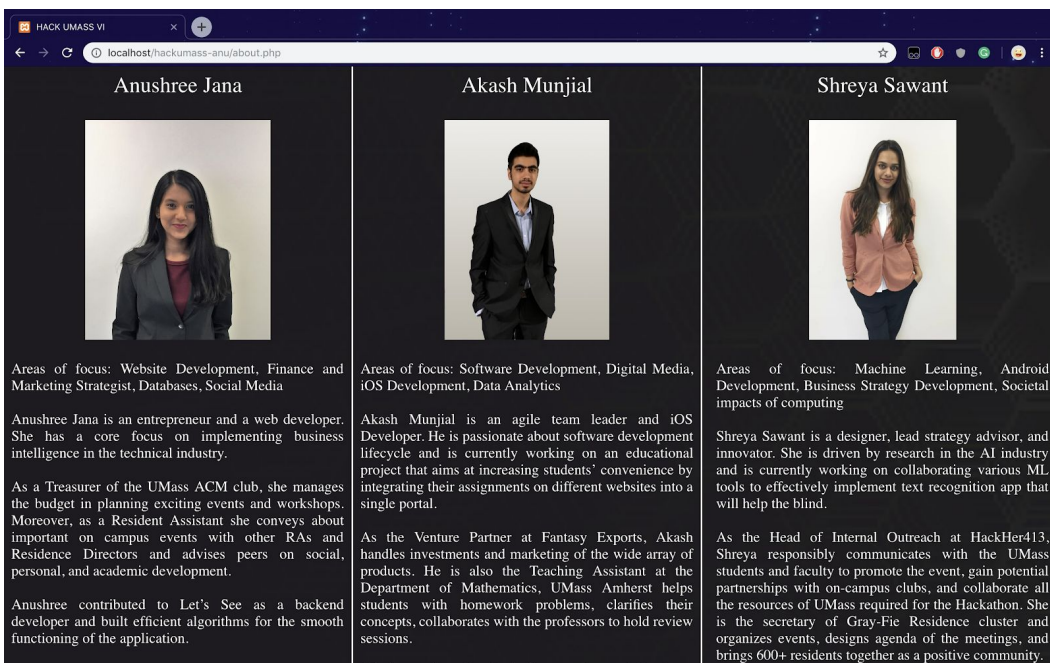

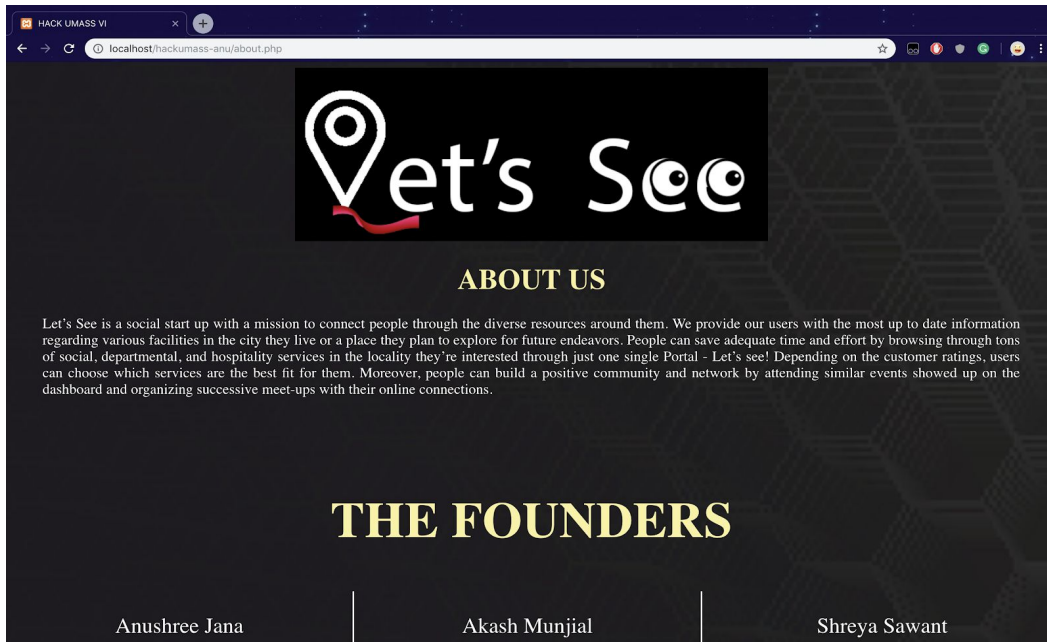

- A user can click on the services category to explore more about it.
- This directs the user to a list of resources with its information under that category.
- Clicking on a resource will open its individual web page.

- The home page also contains an About us button in the bottom left of the webpage, in the footer.
- Clicking on the About us button, opens a new page with the website information.

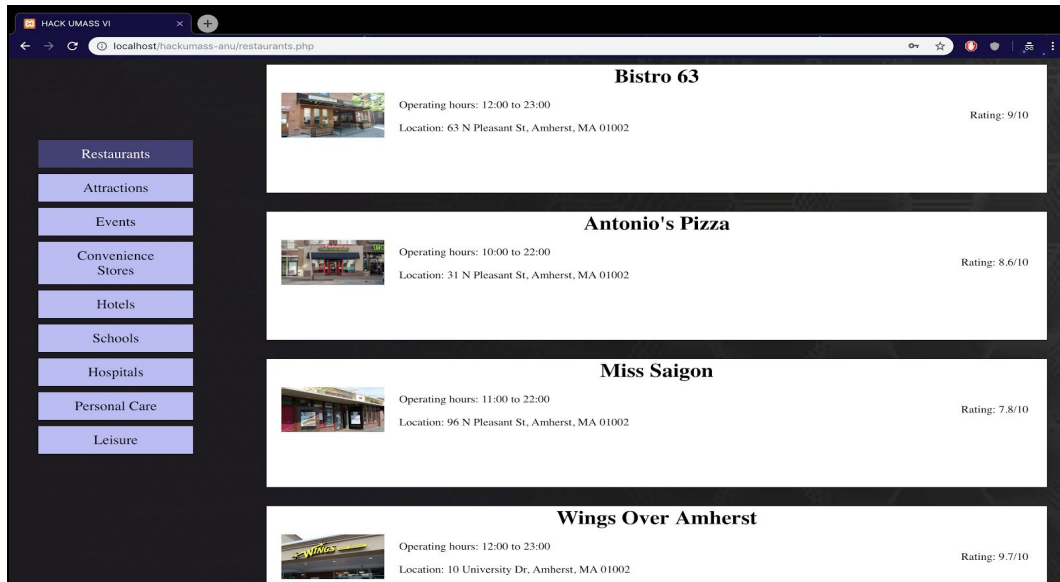

About Us

- This webpage contains a brief description about the web application and information about the founders.
- On the bottom right there is a general email of the application which serves for contacting purposes.

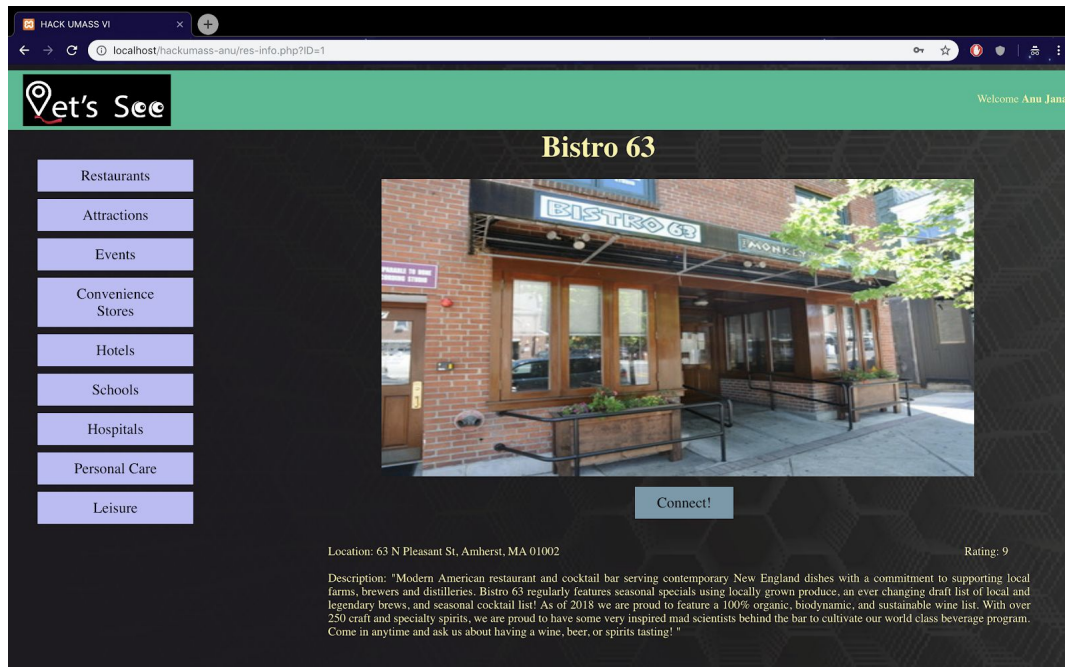

Resource Categories

- Clicking on one of the filter blocks on home page opens a new web page with a list of resources under that category.

- By clicking on a particular facility, a user can get more insight into it through its contact information, location, operating hours, description and reviews which appears on a different web page.
- A user who has logged in can also submit reviews about the resource.

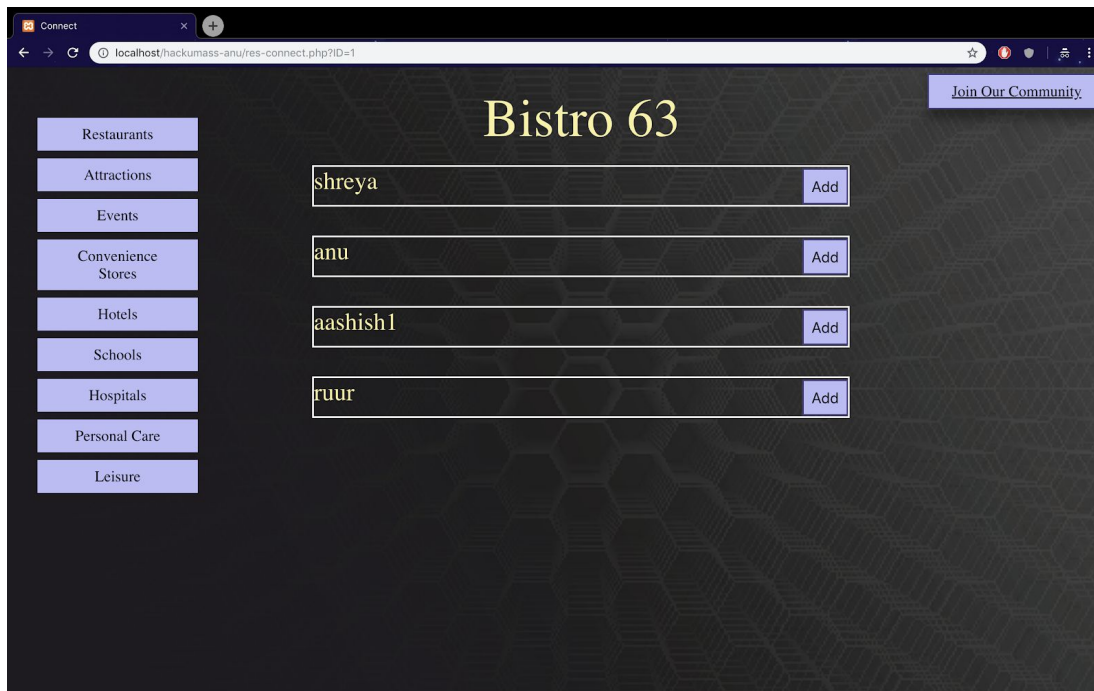

Review Submission

- Reviews submitted by users appear on the bottom left corner of the webpage.
- A logged-in user can submit review by entering text in the text field and then clicking on the submit button.
- If a user wishes to socialize with people who have used the particular resource or are interested in using it can use the connect feature.

Connect with Friends

- Clicking on the Connect button will open a new home page with a list of users who are interested in the resource or have used it.
- A user can connect with other user by clicking on the add button and sending a connection request.

END LINE SUMMARY

The goal of this project has been to incorporate a positive community and constructive socialization in any place through the happening events and established services there. Let's see is different from other traditional social networking sites, in a way that its algorithm gathers vast information about resources in a location of the user's choice and then suggests users to get connected in a community depending on their mutual likes for facilities in that area.
